

Scalability & Future Plan

Date	29 September 2026
Team ID	SWTID-2026-2905
Project Name	LegalEase: AI-Powered Legal Document Generator
Maximum Marks	1 Mark

Scalability & Future Plan:

This document outlines how the current project solution can be scaled to handle larger user bases, increased data loads, or extended features in the future. It also captures the team's roadmap for enhancing and evolving the project beyond its current state.

Current System Limitations:

S.No	Limitation	Impact	Priority to Address (High / Medium / Low)
1	Dependence on external Gemini API	Service availability and API limits can affect generation.	High
2	Local deployment and limited resources	Concurrent users may reduce responsiveness.	Medium
3	Sensitive legal-document data	Requires careful handling and secure storage.	High

Scalability Plan:

S.No	Scalability Aspect	Current State	Proposed Upgrade / Solution
1	User Load	Local / limited concurrency	Deploy backend with scalable cloud infrastructure and load balancing.
2	Data Storage	Temporary / controlled storage	Use secure managed storage with encryption and access controls.
3	Performance	API-dependent generation	Add caching, async processing and optimized prompts.
4	Security	Environment-based API key	Add authentication, encryption, audit logs and secure secrets management.

Future Roadmap:

Phase 1	Enhanced document templates	1-2 months	Broader legal document coverage
---------	-----------------------------	------------	---------------------------------

Phase 2	Multilingual document generation	2-4 months	Improved accessibility
Phase 3	Legal database integration	4-6 months	More context-aware drafting
Phase 4	Advanced contract analysis	6-9 months	Clause analysis and improved review
